About

My name is Irah. And this is Levi, the pug.

I'm a budding developer currently enrolled in a Flex Track Bootcamp at Coder Academy hoping to transition to a career in web design and development.

I have 10 years of experience in the financial services industry, and I find myself coming back to my curious and creative roots.

I'm a lover of conceptual design, process and coffee. I absorb ideas from everyday life that I apply to my work and design. My desire to build and create is guided by order, simplicity, geometry and minimalism. I am always learning, always trying things out and never bored.

In my spare time, I dabble with graphic design and digital illustration. Check out some of my works [here](#).

A blog post card featuring a black and white photograph of a person sitting on a chair in a field, surrounded by floating documents. The title is "WHAT MAKES A T-SHAPED INDIVIDUAL", the date is "07 Nov 2020", and the content is a snippet of text. A "READ MORE" button is at the bottom.

A card for a "PHONE NUMBER VALIDATOR" service. It features a graphic of three people with speech bubbles, the title "PHONE NUMBER VALIDATOR", a snippet of text, and a longer descriptive paragraph at the bottom.

Components

The screenshot shows the WAVE web accessibility evaluation tool interface. The address bar at the top contains the URL "https://irahrosete.netlify.app". Below it is a toggle switch labeled "Styles: OFF" which is turned "ON". The main content area is titled "Contrast". It includes tabs for "Summary", "Details", "Reference", "Structure", and "Contrast", with "Contrast" being the active tab. A message states: "No contrast errors were detected in the page. Manual testing is necessary to test for other potential contrast issues." Below this message are two color swatches. The first is for the "Foreground Color" (#5888B4), which has a lightness slider set to approximately 50%. The second is for the "Background Color" (#3F4244), also with a lightness slider set to approximately 50%. At the bottom, the "Contrast Ratio" is displayed as "2.69:1".

Next Steps:

- Review your Violations:** You will see a description of each violation along with recommended best practices your team can implement immediately to improve your compliance score.
- Get your Free Premium Test, which includes:**
 - 78 additional tests performed on your submitted URL
 - Comprehensive downloadable report with test results and best practices
 - Unlocks the ability to run the free premium test on additional URLs

Violations

Provide a valid label for form fields

Severity: 10 10

When on-screen labels are present, they must be programmatically associated with form fields. When on-screen labels are not present, form fields must be given an accessible label.

When form fields do not have a programmatic (accessible) label, assistive technologies may incorrectly render the label or provide no label at all to users. When labels are not present or are incorrect, users of assistive technologies may not be able to complete a form.

The HTML5 specification has a new form field attribute called `placeholder`. This represents a label or hint, such as a word or short phrase, that is assigned to a form field such as an input field. The label or hint appears within the form field and goes away when users start typing. When the `placeholder` attribute is used, the label or hint may not be detected by assistive technologies. Therefore, developers should provide off-screen text in the `label` element of the form field or provide a `title`.
